

Chargeback and Dispute Handling Procedure

Version: 1.2

Date: 2026-02-25

Status: IN EFFECT

Applies to: Impact Amplifier (vote purchase) — Stripe Checkout transactions

Related: Stripe Responsibility Matrix, Impact Challenge vote purchase plan §4.5 D6

1. Overview

The Impact Amplifier vote purchase is a **donation-type** transaction, subject to business rule D6:

D6: "Donations are non-refundable" — the transaction is by nature a donation, not a product sale.

Nevertheless, the Stripe/card issuer **chargeback** (reversal) mechanism remains technically available to the cardholder. This procedure documents Sharity's obligations in such cases.

2. Chargeback Timeframes

Phase	Timeframe	Responsible party
Cardholder chargeback filing	120 days from the transaction date (Visa/MC)	User → issuing bank
Stripe notification	~1–2 business days after the bank filing	Stripe → webhook: <code>charge.dispute.created</code>
Sharity response window	7 calendar days from Stripe notification	Sharity admin
Bank decision	30–90 days from evidence submission	Issuing bank

3. Chargeback Handling Process

3.1 Receiving Notification

- 1. Stripe webhook** (`charge.dispute.created`) → the system automatically logs: - `wp_impactshop_vote_purchases.status` → `disputed` - Guard alert → Discord webhook (operations channel) - Email notification → Ops Squad
- 2. Manual detection** — if webhook processing fails for any reason: - Stripe Dashboard → Payments → Disputes — check daily - P2-level incident → see SLA §2

3.2 Investigation (≤ 2 business days)

Check	Where	What we look for
Transaction details	<code>wp_impactshop_vote_purchases</code> table	<code>stripe_session_id</code> , <code>amount</code> , <code>timestamp</code> , <code>pseudo_id</code>
Webhook log	Application logs	Successful checkout callback entry
User data	DB + Stripe Dashboard	Email, <code>pseudo_id</code> , IP, Cloudflare Turnstile result
Fraud signals	Stripe Radar	Risk score, IP country, card fingerprint
Multiple purchases	DB query	Whether multiple purchases originated from the same <code>pseudo_id</code> /email/IP

3.3 Decision

Situation	Action	Vote handling
Fraud — unauthorized card use (not the actual cardholder)	Submit evidence → via Stripe OR accept refund	Votes revoked
Friendly fraud — the actual buyer initiates reversal	Submit evidence (checkout evidence)	Votes frozen until decision

Legitimate complaint — actual system error, double charge	Accept refund	Votes corrected — only the duplicate portion revoked
Unknown / uncertain	Submit evidence if possible	Votes frozen

3.4 Evidence Compilation

The following items must be attached to the Stripe dispute response:

1. **Transaction evidence** - Checkout Session screenshot (from Stripe Dashboard) - Webhook delivery log (success/timestamp) - Post-purchase confirmation (if email was sent)
2. **Evidence of user intent** - Cloudflare Turnstile verification = pass → not a bot - Checkout text confirming donation nature: *"Donation via Impact Challenge"* - Terms & Conditions link on the checkout page
3. **Donation-specific argumentation** - The Impact Amplifier vote purchase is a **donation act**, not a product/service purchase - Clear disclosure on the checkout page: *"50% of the amount goes to the Common Donation Pool, which is distributed among NGOs in proportion to votes (quarterly per Terms of Service); the user casts the received votes for the selected NGO."* - D6 rule: occurs with the donor's prior consent
4. **Submission:** Stripe Dashboard → Disputes → Submit Evidence

3.5 Outcome Handling

Stripe decision	Action
Won (in Sharity's favor)	<code>status</code> → restore to <code>completed</code> ; unfreeze votes; closing log entry
Won partially (partially in	<code>status</code> → <code>completed</code> for the undisputed portion; reduce <code>votes_granted</code> in proportion to the refunded

Sharity's favor)	amount; partial pool correction (<code>refunded_amount</code> × 0.5); log entry for both portions
Lost (in cardholder's favor)	<code>status</code> → <code>refunded</code> ; permanent Vote Revocation; pool reduction
Accepted (Sharity does not contest)	<code>status</code> → <code>refunded</code> ; permanent Vote Revocation; pool reduction

4. Vote Revocation Procedure

4.1 Manual Revocation (WP-CLI)

```
wp impactshop vote-purchase void --order_id=<stripe_session_id>
```

This performs the following operations: -

`wp_impactshop_vote_purchases.status` → `voided` / `refunded` -
`wp_impactshop_challenges.total_votes` → decrease by the number of granted votes - `wp_impactshop_challenges.pool_amount` → decrease by the donation portion ($\text{pool_share} = \text{amount} \times 50\%$)

4.2 Pool Correction

- The pool amount decreases by the donation portion (`amount` × 0.5)
- If the quarter has not yet closed: the votes automatically disappear from the vote ratio
- If the quarter **has already closed** and payout was made: a **manual correction** must be performed in the next Quarterly Distribution (negative line item for the affected NGO, **if the votes proportionally influenced the result**)

4.3 Logging

Every dispute must be logged:

```
disputes.log:
2026-02-25T14:30:00Z | dispute_id=dp_xxx | session_id=cs_xxx | am
```

5. Prevention

5.1 Current Protection Layers

Layer	Description	Configuration
Cloudflare Turnstile	Bot/automation filtering before checkout initiation	Before checkout form
Rate limiting	IP: max 10 checkout/hour; pseudo_id: max 5 checkout/hour	MU plugin + Cloudflare WAF

Stripe Radar	Built-in fraud scoring, blocking risky transactions	Stripe Dashboard → Radar Rules
3D Secure	Mandatory SCA (Strong Customer Authentication) in the EU	Stripe automatic
Clear disclosure	Using the word "Donation" instead of "Purchase"	Checkout UI texts

6. Escalation Matrix

Dispute amount	Decision maker	Escalation
≤ HUF 5,000	Ops Squad self-service	None (standard procedure)
HUF 5,001 – 50,000	Ops Squad + finance officer	Joint decision within 48h
> HUF 50,000	Management + legal counsel	Immediate escalation, legal opinion requested
Recurring (>3 disputes/month)	Management	Fraud pattern investigation, Stripe support involvement

7. Review

- **Frequency:** quarterly, or after any dispute event

- **Responsible:** Ops Squad
 - **Metric:** dispute rate < 0.1% (Stripe requirement: < 0.75%)
-

Changelog

Version	Date	Change
1.0	2026-02-25	Initial version — draft
1.1	2026-02-25	"Won partially" outcome added (§3.5)
1.2	2026-02-25	Finalization: internal file references removed, checkout text clarified (Common Donation Pool), audit notes incorporated
